| Setting                  | Value / Action                          |
|--------------------------|-----------------------------------------|
| Configuration Tab        | Open karvo                              |
| Show on Categories       | Applicable categories select karvo      |
| First Category Page      | Table view settings configure karvo     |
| Shape Images (Lab-Grown) | Additional shape create karvo if needed |

## Important Notes / Troubleshooting

### ■ ■ Table View — Diamond List Page

Diamond list page ane category page par table view properly activated ane setup che ke nahi te test karvo.

### ■ ■ Category-Specific Table View

Particular category ma j table view joitu hoy to specific setting configure karvo.

### ■ ■ Shape Images — Lab-Grown

Lab-Grown maate shape images render na thay to:

1. Additional shape for Lab-Grown create karo
2. Table View Admin > First Category page > Parent category for Lab-Grown select karo

### ■ ■ Start with Diamond — URL Issue

Second step par 'Start with Diamond' ma aave tyare URL mapping issue aave shake che. Sub-category slug incorporate thay che. Fix:

Table View Admin > Configuration Tab > 'Show on Categories' dropdown ma all applicable subcategories ya parent categories select karo.
